QUALIFICATION PROFILE

Full Stack Software Developer with 5+ years of experience building and supporting custom software products and cloud-based applications. Experienced across the full software lifecycle, from requirements and architecture through implementation, API integration, testing, deployment, and production support. Strong programming background in JavaScript, TypeScript, Python, C++, and C#, with experience developing frontend applications, backend services, REST and SOAP web services, and database-backed systems. Hands-on experience with API authentication, OAuth 2.0, JSON/XML data exchange, webhooks, and third-party service integration. Comfortable working directly with customers and stakeholders to understand business requirements, troubleshoot technical issues, and deliver reliable solutions.

CORE COMPETENCIES

Programming: JavaScript, TypeScript, Python, C++, C#, .NET, Node.js

Full Stack: React, frontend development, backend services, REST APIs, SOAP web services, GraphQL

Integrations & Web Services: REST, SOAP, JSON, XML, OAuth 2.0, webhooks, third-party API integration, API authentication

Data & Databases: PostgreSQL, MySQL, SQL, database-backed applications

Cloud & DevOps: AWS, Azure, Docker, Terraform, Git, GitLab, CI/CD, deployment automation

Quality & Support: Automated testing, release validation, debugging, root cause analysis, troubleshooting, production support

Languages: English — business fluent in reading, writing, and speaking

EXPERIENCE

INDEPENDENT SOFTWARE DEVELOPER / CONSULTANT

Self-Employed — Remote

2021–Present

- Designed and developed custom software applications from business requirements through architecture, implementation, testing, deployment, and ongoing support.
- Developed full-stack solutions using JavaScript, TypeScript, React, Node.js, REST, GraphQL, C#, .NET, Blazor, and relational databases.
- Integrated applications with external APIs and services, handling data exchange and application workflows across multiple systems.
- Developed and consumed REST APIs and worked with structured JSON and XML data in application integrations.
- Worked directly with customers and stakeholders to understand business workflows, translate requirements into technical solutions, and deliver software iteratively.
- Built backend services and APIs supporting frontend applications and business processes.
- Designed and maintained database-backed applications using PostgreSQL, MySQL, and SQL.
- Diagnosed and resolved application, API, database, deployment, and infrastructure issues through debugging and root cause analysis.
- Maintained and enhanced existing applications by implementing new functionality, resolving defects, and improving reliability and maintainability.
- Used Git and GitLab throughout development, managing source code, changes, collaboration, and release workflows.
- Built, tested, packaged, and deployed software across development and production environments using repeatable CI/CD workflows.
- Deployed and maintained cloud-based applications across AWS and Azure, troubleshooting application and deployment issues in production.
- Communicated technical issues, proposed solutions, and implementation tradeoffs directly with customers and other stakeholders.

PRIVATE GAME SERVER DEVELOPER / OPERATOR

Independent Project

2025–Present

- Designed and operated a containerized game server using Docker and Terraform across development and production environments.
- Implemented SOAP-based server commands and exposed them through a REST API, working with SOAP/XML and REST/JSON interfaces.
- Implemented OAuth 2.0 authentication for user sign-up and account access.
- Integrated Discord webhooks to deliver CI/CD and deployment-related notifications from automated development workflows.
- Built release workflows covering compilation, testing, packaging, deployment, and post-deployment verification.
- Designed infrastructure as code with Terraform to create reproducible environments and automate infrastructure configuration.
- Investigated application, API, runtime, deployment, and environment issues through structured troubleshooting and root cause analysis.
- Optimized infrastructure resource usage by separating build-time tooling from production runtimes and isolating frontend workloads on dedicated web workers.

PROJECTS

PROGRAMMING.TEAM — AI-POWERED RESUME APPLICATION

C# / .NET / Entity Framework Core / Blazor / REST / AI APIs

2024

- Developed an application for analyzing job descriptions and tailoring resumes to specific job requirements.
- Built application functionality using C#, .NET, Entity Framework Core, and Blazor.
- Worked across web, REST API, business, data, AI, and testing components of the application.
- Integrated external AI services through APIs and processed application data across multiple application layers.
- Implemented automated tests to validate application behavior and data processing.

EMBEDDED AI / MACHINE LEARNING PROJECTS

Academic Projects

2020-2021

- Implemented neural-network-based tilt/orientation estimation from gyroscope data and voice recognition on microcontrollers.
- Gained hands-on experience with AI/ML concepts, data processing, and software development on resource-constrained systems.

EDUCATION

University of California, Los Angeles (UCLA) — Los Angeles, CA

Electrical Engineering

Santa Barbara City College — Santa Barbara, CA
